NOQOL 1%

(Maduramicin 1% Ammoniumpremix)

Maduramicin Ammonium is the latest achievement developed by our factory and the National Agricultural and Microbial Engineering Industrial Testing Base of Beijing Agricultural University. The product comes up to 90's international advanced level. It is the most effective and the least dosage administered anticoccidial especially for poultry. It has effective action against Eimeria tenella coccidial. Maduramicin Ammonium has no intersection resistance with other can interfere with the growth of coccidial, which have resistance to other anticoccidial. It can form a non-living environment to make the coccid's metabolism collapsed and eventually make the coccid die.

Agent types: 90% Maduramicin Ammonium

1% Maduramicin Ammoniumpremix

Dosage and administration:

First dilute Maduramicin Ammonium with proper amount of feedstock, until it is mixed homogeneously. Then further dilution and mixing until the mixture containing 5PPM of Maduramicin Ammonium (That is 5g Maduramicin Ammonium per ton of feedstock)

Cautions:

1. Discontinuing the drug 5 days before sale.
2. It is safe to operator, because Maduramicin Ammonium has good pellet homogeneity and adherence, there is least powder to be inhaled and because of the least quantity of Maduramicin Ammonium in the feed, as a matter of fact, it can be hardly found in the dust.
3. It is prohibited to feed the chickens with Maduramicin Ammonium during the term of laying eggs.
4. Expiration date: 2 years.
